

## Problem 1: Favorite & Personalized Web App

[35 Points]

The internet is a big place, with a lot of content. Billions of website is available on the internet. Web constantly changing, it's hard to keep track of which sites have the best content and resources.

To make things easier, you have to categorize your favorite and personal sites.

**Task 1:** Create an attractive login web page to enter into this Web app.

**Task 2:** Create a Main page need to show the different categories like

- Personal Site ( Essential category)
- Food
- Shopping
- Movies
- Music
- Books
- Software

Likewise you can choose your own categories. Personal site is the essential option, and choose other 2 favorite categories of your choice.

Designing is up to you, you could design the Main page using with three favorite tabs. Each tab can have the list of websites in that category. If you click the particular site, should direct to the website.

Discuss with your team member to decide the designing part.

Sample Idea :

A Customized View for the Personal site category

For example if you choose the Personal tab it shows the customized list of websites at least five sites or more. You could create more customized view as per your creativity.

If the user choose the

If the user chooses the  button, it takes to the particular website.

Creativity in Designing: 5 points

Coding: 30 Points

## Problem 2: Shared Preferences.

[10 Points]

Use the Created Login page for the Walmart store from Lesson - 4. Apply Shared Preferences concept to store the last login credentials.
